# ARYS™ me

Getting better. Everyday.

## What is ARYS™ me?

Thanks to the intelligent tracker with integrated sensors, ARYS™ me offers the possibility to follow all your day-by-day arm movements. Each handshake starts to be a part of your daily therapy.

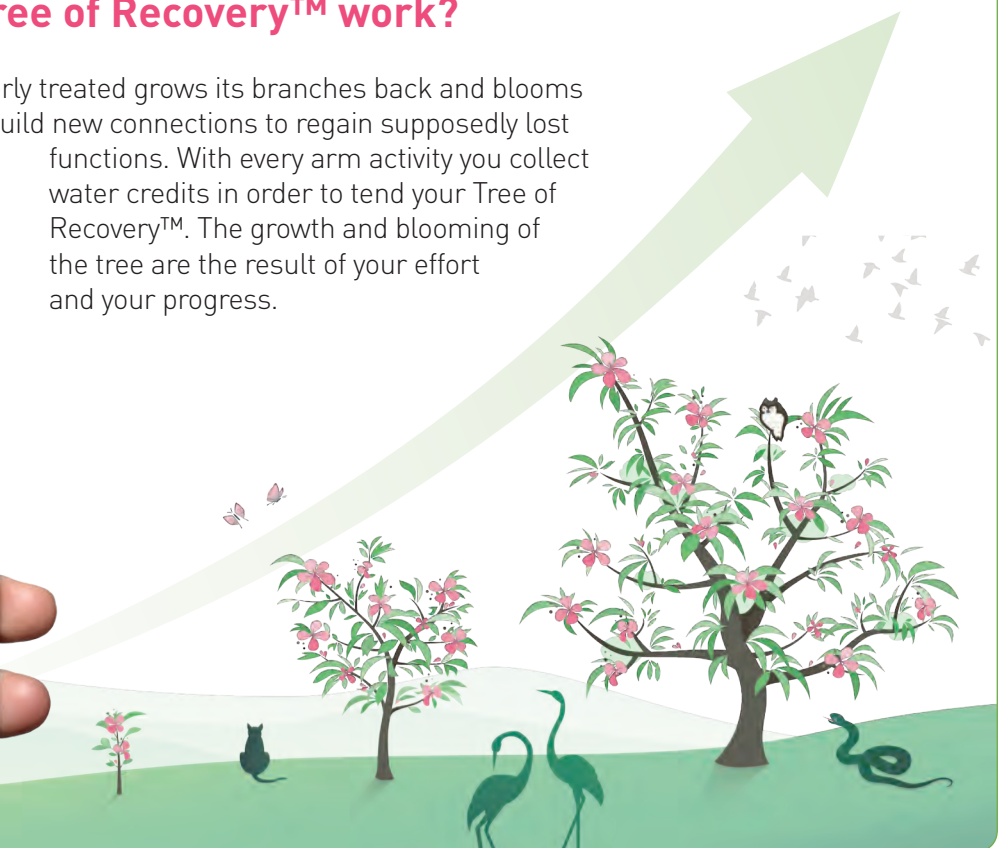

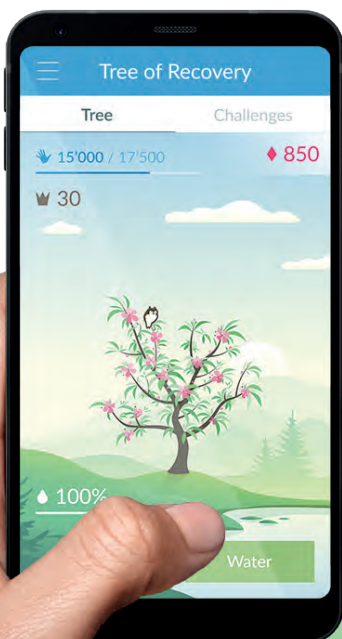

The data collected are sent to the Smartphone App and are converted to therapy-relevant information. Every day advancements are shown by the Tree of Recovery™ in an easy to understand form in the App.

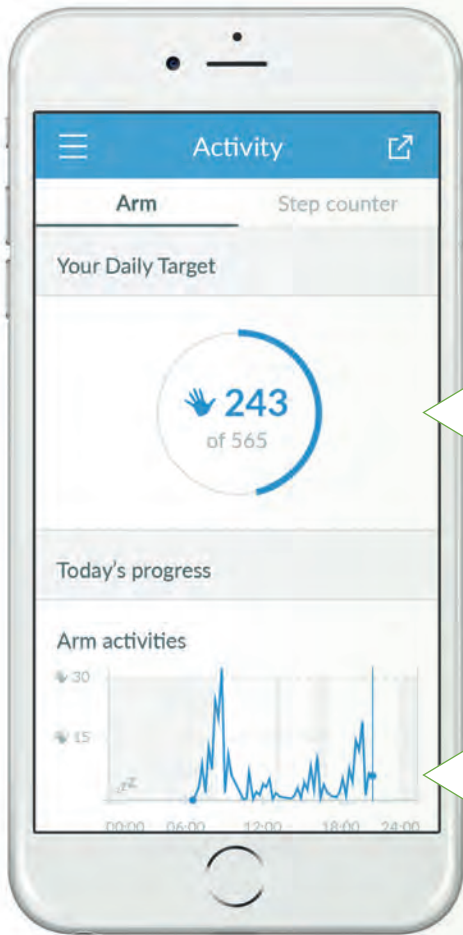

- ▶ ARYS™ me reminders alerts you discretely in case of lack of activity of your paretic arm
- ▶ The individual daily targets of ARYS™ me spurs you for small extra efforts every day
- ▶ Celebrate your success – ARYS™ me shows you in a playful way the progress you made already

## How does the Tree of Recovery™ work?

As a wounded tree properly treated grows its branches back and blooms again, so can our brain build new connections to regain supposedly lost functions. With every arm activity you collect water credits in order to tend your Tree of Recovery™. The growth and blooming of the tree are the result of your effort and your progress.

## Train at your speed!

ARYS™ me never pushes you too hard. It learns from you everyday and sets new realistic targets based on your performance. You'll have the motivation you need to go a little further every day.

## Stay on track.

See your progress when and where you want - on the App or on the tracker itself. The LED status bar on the tracker shows you your intermediate result with regard to your daily target.

## Discreet assistant.

ARYS™ me monitors your activity throughout the day and discretely alerts you when it is time to move your arm. All reminders will be shown in the App too.

## Track your progress!

- ▶ Display your progress in weekly or monthly view.
- ▶ Look back and see your achievements.
- ▶ Celebrating your successes will make it easier going further.
- ▶ We help you to achieve your goals while staying motivated.
